DETAILED ACTION

Information Disclosure Statement

1. The German Search Report, cited in the "Other Documents" section of the Information Disclosure Statement, has been considered but has not been made of record because it is an unpublished document. All other documents have been made of record.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Diethelm (U.S. Patent 5,212,023). The reference is directed to a solid electrolyte fuel cell comprising an integrated heat exchanger (see abstract). The heat exchanger is an intermediate plate that separates two fuel cells (40) and comprises two partial elements (plates 31a, 31c) (see Figs. 3 and 5). Intake air (stream "A") is passed through the heat exchanger and is then routed in the opposite direction across the surface of the cathode (stream "B"). Stream "A" is in direct thermal communication with stream "C," the anode fuel gas, across plate 31c.

Thus, the instant claims are anticipated.

Allowable Subject Matter

4. Claims 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

Claim 6 recites, among other features, the presence of a baffle such that two partial flow regions through which flow occurs successively and in opposite directions develops in the heat exchanger. Diethelm is the closest prior art to this subject matter. However, the reference does not disclose a baffle that causes cross-flow to develop *inside* the heat exchanger as required by claim 5 (the second half of the flow, e.g., stream “B” is considered to be in the cathode flow section). As such, claim 6 contains allowable subject matter.

Conclusion

6. With regard to the “X” references on the German and International Search Reports, some of these references, notably EP 1075033, JP 61-233978, and EP 399077, are believed to be anticipatory of at least instant claim 1. However, these references have not been applied at this time because they are not as pertinent to all of the claims as the Diethelm reference, which is considered to be the closest prior art.
